Aircraft FactSheet

## OUR ORIGIN STORY

- **2010:** Our team set out to explore the possibilities of electric, vertical takeoff and landing flight.
- **2019:** Our team and its generations of aircraft became Wisk through a joint venture between the Boeing Company and Kitty Hawk Corporation.
- **2023:** Wisk became a fully-owned subsidiary of Boeing. While we operate separately, this relationship allows us to tap into Boeing's development, testing, and certification expertise, and more.

## ABOUT WISK

Wisk is a leading Advanced Air Mobility (AAM) company and developer of the world's first self-flying, all-electric, four-seat eVTOL air taxi. Since 2010, Wisk has developed six generations of aircraft, resulting in the industry's largest fleet of AAM eVTOL aircraft. Wisk is fully backed by The Boeing Company but continues to operate separately.

- People: ~800, with most in engineering, manufacturing, and flight test
- Locations: U.S., New Zealand, Canada, Australia, and Poland
- Patents Issued: 300+ globally
- Test Flights: 1,750+ (full-scale aircraft)

## AIRCRAFT FACTSHEET

### Our Company

Wisk's mission is to provide safe, everyday flight for everyone. Wisk is at the forefront of the Advanced Air Mobility (AAM) industry, and since 2010 we have:

- Developed and successfully flown five generations of aircraft
- Conducted 600+ safe, successful test flights without an accident
- Expanded across the globe to operators in New Zealand, Australia, and Canada

We are committed to autonomous flight, and were the first company in the US to successfully fly an autonomous air taxi.

Wisk enjoys a strong strategic partnership with Boeing, and has been able to draw upon Boeing's extensive aviation, engineering, and certification expertise. In January 2022, Boeing announced an additional \$100M investment in Wisk.

### Our 6th Generation Aircraft

Our 6th Generation aircraft represents the first ever candidate for FAA certification of an autonomous passenger-carrying eVTOL air taxi. We've designed the aircraft to exceed today's rigorous aviation safety standards, while also bringing a new level of passenger comfort to air travel.

With this aircraft, we will redefine long-standing concepts of flight and cabin air safety systems, and more accessible air in cities. Generation 6 will set the standard for the air taxi market and the future of travel by leveraging:

- A safety-first approach
- Autonomous flight with human oversight
- Human-centered design and customer experience
- Affordability and accessibility

By combining industry-leading autonomous technology and software, human oversight of every flight, and an overall simplified design, Generation 6 is the most advanced air taxi in the world, and will be one of the safest passenger transport systems in commercial aviation.
